Project Introduction

Introduction

A Bridge Management System is a method for tracking and addressing bridge conditions. Similarly, a Pavement Management System is a systematic method for tracking and addressing pavement conditions. A Bridge Management System exists for New York State, and individual Pavement Management Systems currently exist in the City of Syracuse (City), Onondaga County (County), and New York State. The goal of this project is to combine all of the data from the various jurisdictions into one management system that is linked to a Geographic Information System (GIS). By combining all of the condition ratings into a GIS format, data can be mapped, analyzed, presented and accessed in an efficient manner.

All maps included in this report were compiled utilizing a derivation of the New York State Department of Transportation (NYSDOT) base map system. The NYSDOT digital GIS files are the basis of the calculations in this report.

Data Compilation/Analysis

GIS was used to analyze the pavement datasets provided to the SMTC by member agencies. Utilizing GIS, centerline mileage summations were calculated based on the pavement condition rating (i.e., excellent, good, fair and poor) for each jurisdiction. The centerline mileage calculations in this report are presented in two sections. The first section presents data by both all *federal-aid eligible* and only rated *non federal-aid eligible* roads that are owned by the City of Syracuse, local jurisdictions (federal-aid eligible only), Onondaga, Oswego or Madison County and New York State (NYSDOT or the New York State Thruway Authority (NYSTA)). Jurisdictions are listed independently of each other and include various pavement condition rating descriptions and details as analyzed in GIS, including the number of centerline miles rated and the number of centerline miles per rating. The second pavement section presents data for *federal-aid eligible* roads by each jurisdiction within Onondaga County and the small portions of Oswego and Madison County, which comprise the Metropolitan Planning Area (MPA). In addition, section two further categorizes the federal-aid eligible pavement condition ratings by functional classification per jurisdiction and condition rating category.

All local federal-aid eligible, County, and New York State roads included in this report have been rated on the NYSDOT system. In previous reports, City of Syracuse roads may have been rated on a slightly different scale, which was discovered during the data

analysis of last year's report. This issue is discussed in more detail in Section 3.1i. Additionally, state and local bridges in Onondaga, Oswego and Madison Counties are rated by the NYSDOT on a state bridge condition rating scale.

Although each jurisdiction rates a percentage of roads under their ownership each year, these ratings only portray a sample of data for the entire MPA. Nearly half of the roads in the MPA are under Town/Village jurisdiction, otherwise referred to as "Local" ownership, and are not rated unless federal-aid eligible. These "Local" owned roads account for 1,580 centerline miles or 44% of the total MPA. Only 3%, or 49 centerline miles of these roads are federal-aid eligible.

The pavement condition rating data reported on throughout this working document is based on **linear centerline** miles of roads, not lane miles of roads. The number of miles based on the number of lanes (lane miles), for each approach is not calculated. Instead, the road centerline length, disregarding the number of lanes and direction, is calculated. This calculation is a **linear centerline** mile of pavement.

1. INTRODUCTION

This project was completed by the Syracuse Metropolitan Transportation Council (SMTC) as part of the 2012-2013 Unified Planning Work Program (UPWP). This analysis is the latest installment of the bridge and pavement analyses developed for the SMTC Metropolitan Planning Area (MPA). A Bridge Management System is a method for tracking and addressing bridge conditions. The New York State Department of Transportation (NYSDOT) defines a bridge as “a structure (including supports), erected over a depression, or a obstruction (such as water, etc.), having track or passageway for carrying public traffic, and, measured along the centerline of the roadway, has an opening between supports of 20’-0” or more (may include multiple culvert pipes).” Similarly, a Pavement Management System is a systematic method for tracking and addressing pavement conditions. A Bridge Management System exists for New York State (which includes both state and local bridges), and individual Pavement Management Systems currently exist for the City of Syracuse (City), Onondaga County, and New York State.

All maps included in this document were compiled utilizing a derivation of the NYSDOT base map system. These digital Geographic Information System (GIS) files are the basis of the calculations in this document. Through the process of entering bridge and pavement condition rating data into GIS, a database has been built that is available to all SMTC member agencies with bridge and pavement data from the past several years.

The pavement condition rating data reported on throughout this document is based on **linear centerline** miles of roads, not lane miles of roads. Data in the underlying GIS files, on which the calculations in this report are based, are in the form of linear centerline miles, not lane miles. A linear centerline mile of road is a continuous line of pavement along the center of the length of pavement. A lane mile is the length of each lane in a given section of pavement. For example, one mile of interstate road with two lanes in each direction would have four lane miles. For the purposes of this report, the number of miles based on the number of lanes for each approach was not calculated. Instead, the road centerline length, disregarding the number of lanes and direction, is calculated. This calculation is a **linear centerline** mile of pavement.

The NYSDOT calculates pavement ratings based on linear lane miles. Therefore, the NYSDOT may have different calculations than the results in this report (for example, total miles by jurisdiction, percentages of poor or excellent pavement, etc.). For the NYSDOT official linear lane mile totals, please refer to the NYSDOT Highway Mileage Chart for Onondaga County.

Pavement ratings in this document are presented in two sections. Section one presents data by both all *federal-aid eligible* (FAE) and only rated *non federal-aid eligible* roads that are owned by

the City of Syracuse, local jurisdictions (federal-aid eligible roads only), Onondaga, Madison or Oswego County and New York State. Jurisdictions are listed independently of each other and include various pavement condition rating descriptions and details as analyzed in GIS, including the number of centerline miles rated and the number of centerline miles per rating. The second pavement section presents data for *federal-aid eligible* roads by each jurisdiction and functional classification within Onondaga County and the small portions of Madison and Oswego Counties included in the MPA. In addition, section two further categorizes the federal-aid eligible pavement condition ratings by functional classification per jurisdiction and condition rating category.

All Onondaga, Madison or Oswego County, and New York State roads included in this document have been rated on the NYSDOT system. The City of Syracuse’s rating system may be slightly different from NYSDOT, as is explained in more detail in section 3.li. The overall surface ratings are categorized according to the following chart:

Rating		Condition Description
U	Under Construction/No Data	Not rated due to on-going work or no data was available.
1-5	Poor	Distress is frequent and may be severe.
6	Fair	Distress is clearly visible.
7-8	Good	Distress symptoms are beginning to show.
9-10	Excellent	No pavement distress.

Source: New York State Department of Transportation

The NYSDOT *2010 Pavement Condition Assessment Manual* and the NYSDOT *Pavement Condition of New York’s Highways* contain further information on the pavement rating system used in New York State. National highway and bridge statistics can be obtained from the Federal Highway Administration’s annual *Conditions & Performance Report to Congress*.

Pavement ratings have been entered for roads under the jurisdiction of the NYSDOT, Onondaga, Madison or Oswego County, the New York State Thruway Authority, the City of Syracuse Department of Public Works, and Towns/Villages (local federal-aid

eligible only). Although each jurisdiction rates a percentage of the roads under its ownership each year, these ratings only portray a sample of data for the entire MPA area. About half of the roads in the MPA are under Town/Village jurisdiction, referred to in this report as being under “Local” ownership; these roads are not rated unless they are federal-aid eligible. These Local roads account for 1,580 centerline miles or 44% of the total MPA area. Only 3%, or 49 centerline miles of these roads are federal-aid eligible.

2. BRIDGES

Route 11 bridge over the Oneida River, Town of Cicero

State and local bridges in Onondaga, Madison and Oswego Counties are rated by the NYSDOT on a scale of 1.0 to 7.0. According to the NYSDOT, each element of every bridge span in the state is inspected at least biennially and rated on a scale from 1.0 to 7.0. A bridge’s “condition rating” is the weighted average of the scores given to its components during inspection. Bridges with a condition rating less than 5.0 are categorized by the NYSDOT as being in a “deficient” state. They are candidates for rehabilitation work, replacement or perhaps closure. “Critically deficient” bridges are those that have one or more critical bridge component rated less than 3.0. Critical bridge elements include the structural deck, bridge abutments and supporting columns.

Although the terms “deficient” and “critically deficient” are used to describe the condition of these bridges, it should be emphasized that these bridges are considered safe to carry legal loads, and would be closed or restricted for loads if bridge inspectors find that to be necessary.

Table 2: New York State Bridge Condition Rating Chart		
Rating	Category	Condition Description
<3.0 for a “Critical Element”	Critically Deficient	Bridge is given a priority for funding for rehabilitation, replacement or perhaps closure.
<5.0	Deficient	Bridge is a candidate for rehabilitation, replacement or perhaps closure.
5.0-7.0	Non-Deficient	No bridge distress identified.

Indian Hill Rd bridge over Limestone Creek, Town of Pompey

The charts, tables, and maps at the end of this section illustrate the above concept. Exhibit 1 is a map that represents all bridges in the MPA by jurisdiction; Exhibits 2 and 3 show all bridges in the MPA with Non-Deficient ratings; and Exhibits 4 and 5 show percentages of deficient and critically deficient ratings in the MPA and City of Syracuse, respectively.

A total of 491 bridges have been rated with condition ratings; these ratings were from data provided in April 2012 from the 2010-2011 rating cycle. (Last year there were 492 bridges. One bridge, which is owned by the City of Syracuse, carries Route 5 and crosses the former New York Central Railroad line, has since been partially removed and partially filled to grade; the bridge is no longer in the NYSDOT bridge database.) Exhibit 8 shows the total number of bridges by type of rating within the study area. Exhibit 9 illustrates the total bridges rated in the MPA, and Exhibit 10 categorizes the 491 bridges by jurisdiction and type of rating. Additionally, Exhibit 11 represents the MPA, NYSDOT Region 2 area, NYSDOT Region 3 area, and New York State averages for all rated bridges by type of rating.

Statewide, there are 19,824 rated bridges; the average condition rating of these bridges is 5.35. There are 1,411 total Region 3 bridges, with an average condition rating of 5.37. The average rating for the 1,367 rated bridges in Region 2 is 5.12. Bridges in the SMTC MPA, Region 2, Region 3 and across the State all have similar percentages of critically deficient bridges (SMTC MPA: 0.4%, Region 2: 2.3%, Region 3: 2.0% and statewide: 1.5%). Outside of the SMTC MPA, Region 3 has the highest percentage of deficient bridges with 38% deficient,

while Region 2, New York State and the SMTC MPA have 36%, 33%, and 42% deficient bridges, respectively.

There are two bridges in the MPA rated critically deficient, both of which are owned by the NYSDOT. One is a historic Canal structure over the lock O-I and is most often closed to traffic; this was the only bridge with a critically deficient rating in last year's report. The

Brickyard Falls Rd bridge over Limestone Creek, Town of Pompey

other critically deficient bridge is located in the Town of Geddes in Onondaga County. The bridge carries Long Branch Road over the Onondaga Lake Outlet. Critically deficient bridges are those that have an individual component that has been found to be deteriorated or failing, and because this is relatively rare, these bridges make up a small proportion of the total number of rated bridges. None of the bridges in the MPA under the jurisdiction of the City of Syracuse, Onondaga County, a town or village, or owned by Oswego County, Madison County

or the NYSTA are critically deficient.

Please note that for this report percentages have been calculated individually for each of the three counties found in the MPA: Onondaga, Oswego and Madison. A very small sample of bridges is included in Oswego and Madison Counties' portion of the MPA (4 bridges out of a total of 491 bridges). Overall, 3 bridges are under Oswego County ownership, while 1

bridge is under Madison County ownership. The very small sample size of bridges from these counties should be taken into consideration while reviewing this report.

Forty bridges in the MPA are owned and maintained by the New York State Thruway. Of these, 28 bridges are deficient, giving the Thruway (aggregated as a single *type* of jurisdiction) the highest proportion of deficient bridges: 70%.

Villages have the second highest percentage of deficient bridges in the MPA, with 67%, or 4 deficient bridges.

Of the four County bridges outside of Onondaga County, Oswego County has 3 bridges, one of which is deficient (33% deficient); Madison County has one bridge, which is non-deficient (0% deficient). As explained above, this is a very small sample of bridges drawn

from these counties so these percentages are not representative of bridges in those counties.

Onondaga County and the City of Syracuse have the highest proportions of non-deficient ratings, at 73% and 60%, respectively, while State and Town bridges each have 57% non-deficient ratings.

Besides condition ratings, there are several other measures in existence to rate bridges, including several Federal ratings such as whether a bridge is “structurally deficient,” “functionally obsolete”; or a bridge’s “sufficiency rating”. These ratings help the Federal government decide whether bridges may be eligible for federal bridge replacement and/or rehabilitation funding.

For this report, SMTTC chose to analyze the federal measure of sufficiency ratings. This rating is a numerical value that ranges from 0 to 100, and includes factors for structural condition, bridge geometry, and traffic considerations. A rating between 50 and 80 means a bridge is considered for federal bridge rehabilitation funding, and a bridge rated below 50 means it is considered for federal bridge replacement funding.

The table in Exhibit 12 shows sufficiency ratings by jurisdiction. Village and Town bridges have the highest proportion of ratings below 50 (17% and 14%, respectively). Ten percent of bridges maintained by the Thruway have ratings below 50; seven percent of bridges maintained by the City of Syracuse have ratings below 50; Onondaga County and State bridges have 3% and 4%, respectively, rated below 50; and Oswego and Madison County each have 0% bridges that are rated below 50. Statewide, 7% of bridges are rated below 50.

Note that sufficiency ratings below 50 are not coincidental with critically deficient ratings; there are two critically deficient bridges in the MPA while there are 24 bridges with sufficiency ratings below 50. However, all 24 bridges that have a sufficiency rating below 50 also have a critically deficient or a deficient rating except two, which both have ratings of 5.0, and are right on the cusp of a deficient rating. Sufficiency ratings of below 50 can therefore be interpreted as a middle ground between critically deficient ratings and deficient ratings.

3. PAVEMENT

3.1 Federal-Aid Eligible and Non Federal-Aid Eligible

The jurisdictions of the City of Syracuse, Onondaga County, the NYSDOT and the New York State Thruway Authority each complete a pavement management system on a yearly basis. The rating scale used for each of these jurisdictions is based on the NYSDOT scale, as described in the introduction.

Although local jurisdictions do not have a pavement management system to rate their roads, the NYSDOT rated all of the federal-aid eligible roads under town and village ownership in Onondaga County and the Village of Phoenix using the NYSDOT rating scale. Additionally, the NYSDOT gathered pavement condition ratings for roads under Madison and Oswego County ownership contained in the MPA.

Federal-aid eligible roads are those that provide critical connections within or between communities. Federal-aid eligible roads are identified by their functional classification, a designation based on factors that reflect how a road or road segment fits into the overall street network. The federal-aid eligible functional classes are: urban principal arterial, urban minor arterial, urban collector, rural principal arterial, rural minor arterial and rural major collector.

The addition of local federal-aid eligible road ratings is intended to promote awareness among local jurisdictions of both the condition of their federal-aid roadways and of the opportunity to apply for federal transportation funding to assist with capital projects that may improve conditions for the traveling public in the MPA. A local road rating inventory (and traffic volume information) may allow for a cost/benefit comparison of local and state federal-aid projects during the project selection process.

Newport Road, Camillus

East Genesee Street, Syracuse

In this document, pavement ratings are presented in two sections: section one presents data for all rated roads, both federal-aid eligible and non federal-aid eligible, within the SMTC MPA, and section two presents data only for federal-aid eligible roads.

Both sections provide pavement data grouped by the following jurisdictions: City of Syracuse, Local Federal-Aid Eligible (towns and villages), Onondaga County, Madison County, Oswego County, New York State and New York State Thruway pavement ratings.

All average pavement ratings presented in this report are based on the segments of road that have a rating of 1-10. If the segment did not have a rating (“no data” or “under construction”), it was not included when the calculation of the average (mean) was determined. The data are based on linear centerline miles of roads calculated by the SMTC using GIS.

Within the boundaries of the MPA, approximately half of all roadway miles are under Town/Village jurisdiction, otherwise referred to as “Local” ownership. These roadways are not rated unless federal-aid eligible. These “Local” owned roads account for 1,580 centerline miles or 44% of the total MPA area. Only 3%, or 49 centerline miles of these roads are federal-aid eligible.

3.1.i City of Syracuse Pavement Ratings

Approximately 4,000 blocks of road (corresponding to 420.7 centerline miles) are under the jurisdiction of the City of Syracuse and individually rated by the City of Syracuse Department of Public Works according to the NYSDOT overall pavement rating scale. The NYSDOT rates all of the touring routes in the City of Syracuse, although the City owns most of these roads.

During the data analysis and review process of last year’s report, it became clear that the City of Syracuse had an unrealistic number of 1 and 2 ratings, reflecting a slight deviation from the standard NYSDOT rating scale. Subsequent coordination among SMTC, NYSDOT, and the City of Syracuse resulted in agreement by the City to be re-trained in the NYSDOT rating scale at the Pavement Surface Score Survey Training in Albany. Two City of Syracuse staff attended this training, as well as one staff member from SMTC.

Some of the ratings in this year's report were conducted before this training, but next year all ratings will incorporate the NYSDOT scale.

Exhibits 13, 14, 15, 16, and 17 include information collected for all federal-aid eligible and non federal-aid eligible roads from the pavement management system for the City of Syracuse.

Exhibit 13 indicates the following:

- Approximately 399.2 centerline miles of road in the City of Syracuse were rated.
- 21.5 centerline miles of the 420.7 centerline miles of roads are not included in this document (this includes parks and other special use roads).
- Of the various pavement rating categories (excellent, good, fair, and poor), the highest percentage of rated roads, 42%, were classified as poor.
- The average rating for the City roads is 5.8 (poor condition).

3.1.ii Local Federal-Aid Eligible Pavement Ratings

All town and village roads under local jurisdiction that are functionally classified as federal-aid eligible (i.e. urban principal arterial, urban minor arterial, urban collector, rural principal arterial, rural minor arterial and rural major collector) in Onondaga County and the Village of Phoenix were rated by the NYSDOT on the NYSDOT scale, as described in the introduction. The Local FAE ratings also included roads classified as rural minor collectors; these road segments were removed from the FAE calculations contained in the FAE section of the document. There are no Local FAE (i.e., Town or Village-owned) roads in Madison County or Oswego County (excluding those found in the Village of Phoenix). See Exhibit 39 for a map of the functional classifications of each local road.

Exhibits 13, 14, 15, 16, and 17 include information collected for all Local roads for which there were pavement ratings provided.

Exhibit 13 indicates the following:

- Approximately 54.8 centerline miles of Local roads are rated.

- Of the various pavement rating categories (excellent, good, fair, and poor), most (70%) were rated as either “fair” or “poor”.
- The average rating for the local roads is 6.3 (fair condition).

3.1.iii Onondaga County Pavement Ratings

For the data provided for this report, the OCDOT contracted with a consultant that rated approximately 34% of their roads. In last year’s report, the OCDOT did not provide an adjusted rating for roads that were rated in previous years but not rated during that year; this year, however, OCDOT has provided an adjusted Surface Distress Index (SDI) rating for these roads to account for system deterioration. The ratings in this report include the 2012 ratings.

Exhibits 13, 14, 15, 16, and 17 all represent information collected for all federal-aid eligible and non federal-aid eligible roads from the pavement management system for Onondaga County.

Exhibit 13 indicates the following:

- Approximately 793 centerline miles of Onondaga County roads are rated.
- Of the various pavement rating categories (excellent, good, fair, and poor), the highest percentage of rated roads, 44%, were classified as “poor”, and 30% were classified as “fair”.
- The average rating for the county roads is 6.2 (fair condition).

3.1.iv Oswego County Pavement

Oswego County does not have a pavement management system established for their road network. Therefore, in order to provide accurate condition ratings for the entire SMTC MPA, the NYSDOT continued to rate those roads under county ownership in Oswego County, both FAE and non-FAE, which are inside the MPA.

Exhibits 13, 14, 15, 16, and 17 represent information collected for all rated roads in Oswego County.

Exhibit 13 indicates the following:

- Approximately 12.2 centerline miles were rated.

- Of the various rating categories, the highest percentage of rated roads, 52% were classified as “fair”.
- The average rating for Oswego County roads is 6.9 (fair condition).

3.1.v Madison County Pavement Ratings

Like Oswego County, Madison County does not have an established pavement management system. Therefore, the NYSDOT rated all Madison County owned roads, both FAE and non-FAE in the SMTC MPA as well.

Exhibits 13, 14, 15, 16, and 17 represent the information collected for those rated roads in Madison County.

Exhibit 13 indicates the following:

- Approximately 10.7 centerline miles were rated.
- Of the various rating categories, the highest percentage of rated roads, 73%, were classified as “good”.
- The average rating for Madison County roads is 7.2 (good condition).

3.1.vi New York State Department of Transportation Pavement Ratings

All roads under the NYSDOT jurisdiction were rated on the NYSDOT scale, as described in the introduction.

Exhibits 13, 14, 15, 16, and 17 represent information collected for all federal-aid and non federal-aid eligible roads from the pavement management system for New York State.

Exhibit 13 shows the following:

- Approximately 475.5 centerline miles of the NYSDOT roads within the MPA are rated.
- Of the various pavement rating categories (excellent, good, fair, poor and under construction), the highest percentage of rated roads, 39%, were classified as “fair” and 33% were classified as “good”.
- The average rating for the state roads is 6.6 (fair condition). However, if the state pavement conditions were measured in lane miles, the average would be higher due to the large number of interstate and freeway miles of multiple lane facilities which are in good condition or better.

In Exhibit 33, a comparison was completed between the NYSDOT jurisdiction roads in the MPA, NYSDOT Region 2, and Region 3 and on all New York State DOT roads. The following was determined (note that all calculations are in lane miles except the MPA):

- NYSDOT Region 2 has 64% good roads, 26% fair, and 7% poor roads.
- NYSDOT Region 3 has 29% good roads, 42% fair, and 16% poor roads.
- New York State has 49% good roads, 31% fair, and 9% poor roads.
- The MPA has 26% good roads, 30% fair and 35% poor roads.

3.1.vii New York State Thruway Authority Pavement Ratings

The New York State Thruway is rated on the NYSDOT scale, as described in the introduction.

Exhibits 13, 14, 15, 16, and 17 all represent information collected for all federal-aid eligible roads from the pavement management system for New York State Thruway Authority.

Exhibit 13 shows the following:

- Approximately 31.4 centerline miles of New York State Thruway Authority roads are rated.
- Of the various pavement rating categories (excellent, good, fair, poor and no data), the highest percentage of rated roads, 80%, were classified as “excellent”.
- The average rating for the New York State Thruway pavement is 9.0 (excellent condition).

3.2 Federal-Aid Eligible Pavement Ratings

There are nine functional classification codes in the SMTC study area used to describe the road network. Functional classification is the process by which streets and highways are grouped into classes, or systems, according to the character of service they are intended to provide.ⁱ

<i>Urban Classifications</i>	<i>Rural Classifications</i>
Urban Principal Arterial (interstates, other expressways and other principal arterials)	Rural Principal Arterial (interstate and other)
Urban Minor Arterial	Rural Minor Arterial
Urban Collector	Rural Major Collector Rural Minor Collector
Urban Local	Rural Local

Arterials provide the highest level of mobility, at the highest speed, for long, uninterrupted travel. Arterials generally have higher design standards than other roads, often with multiple lanes and some degree of access control. Collectors provide a lower degree of mobility than arterials. They are designed for travel at lower speeds and for shorter distances. Collectors are typically two-lane roads that collect and distribute traffic from the arterial system.ⁱⁱ The rural functional classification codes apply to those road segments that are outside the SMTC urban area boundary. Two of these rural functional classification codes, rural minor collector and rural local, along with the urban local functional classification are **not** categorized within the federal-aid eligible network and are therefore not eligible for traditional federal surface transportation program funds.

Regarding the most recent TIP, total funding equates to approximately \$359,029,000. Consistent with previous multi-year capital programs, 70% of funds have been programmed to bridge (46%) and highway (24%) projects (see Chart 1). The TIP identifies the timing and funding of all transportation projects scheduled for implementation in the MPA over a multi-year period using federal transportation funds (federal highway and federal transit). Projects selected for funding relate to specific goals and objectives established for the MPA, which include improving the average pavement

ⁱ Federal Highway Administration. Highway Functional Classification Concepts, Criteria and Procedures. Revised March 1989. Section II-1.

ⁱⁱ Definitions taken from the Federal Highway Administration’s Conditions and Performance Report, Chapter 2

condition rating for medium and high volume roads, increasing the number of non-deficient bridges and improving the accessibility, mobility and safety of the existing transportation network in the SMTC MPA.

Chart 1: 2011-2015 TIP Percentage Share by Category

Data for linear centerline length of all FAE roads under the jurisdiction of the City of Syracuse, local roads, Onondaga, Madison or Oswego County, New York State, and the New York State Thruway is included in Exhibits 19-34.

Exhibit 18 displays total rated centerline miles of Federal Aid Eligible roads by rating category in the SMTC MPA. Among all rated roads, approximately 117.5 miles of centerline miles of road under the jurisdiction of the City of Syracuse, 51 miles under local jurisdiction, 8.9 miles under the jurisdiction of Madison County, 9.6 miles under the jurisdiction of Oswego County, 279.7 miles under the jurisdiction of Onondaga County, 438.5 miles under the jurisdiction of New York State, and 31.4 under the jurisdiction of New York State Thruway Authority are federal-aid eligible. Note that for this study, ramps are not included in the Federal Aid-Eligible network of roads.

Exhibits 38, 39 and 40 show the functional classification code for roads in the MPA (excluding rural minor collectors and rural/urban local functional classifications), and Exhibit 41 is a map of the functional classification system in the MPA. Exhibit 42 displays the jurisdiction of each road in the MPA.

Exhibits 21, 23, 25, 27, 29, 31, 34 and the corresponding charts illustrate the condition of each of the types of functional classifications for each jurisdiction. Exhibits 36 and 37 are maps of all the federal-aid eligible pavement condition ratings.

Exhibit 20 presents data for all federal-aid eligible roads in the MPA:

- The highest percentage of rated roads in the “excellent” rating category fall under Oswego County and the New York State Thruway’s jurisdiction at 80%.
- Of the various pavement rating categories (excellent, good, fair, poor and no data), the highest percentage of rated roads in the “poor” category are Onondaga County roads (48%).

4. TRENDS

Utilizing data from previous Bridge and Pavement Condition Management System reports, it is possible to examine trends in bridge and pavement condition by jurisdiction. Overall, bridge ratings in the MPA (measured as the proportion deficient bridges) have increased since last year's rating cycle, as well as over the last seven years. Pavement scores for all roads in the MPA continue to decline as well.

Bridges

Chart 2 shows percent deficient bridges by jurisdiction for the last seven rating cycles. It is important to keep the total number of bridges in mind for each jurisdiction. NYSDOT's 302 bridges (62% of all SMTC MPA bridges) have generally trended towards more deficient bridges - from 31% in 2004-2005 to 42% in 2010-2011 - as have the 491 bridges in the MPA from all jurisdictions, which went from 36% in 2004-2005 to 42% to 2010-2011. The 2010-2011 rating cycle shows City of Syracuse bridges to be at the lowest percentage deficiency of all its observed rating cycles - 40% in 2010-2011, from 47% in 2004-2005. Onondaga County has shown improvement as well, going from 33% deficient in 2004-2005 to 27% deficient in 2010-2011.

Sufficiency ratings have only been analyzed by SMTC for this report and last year's. Of note is an increase in bridges with sufficiency ratings below 50 under the Thruway's jurisdiction: in the 2009-2010 rating cycle, none of the Thruway's 40 bridges were rated below 50, while this year, 4 bridges (10%) were rated below 50. Seven NYSDOT bridges (2%) were rated below 50 in last year's report, compared to 12 this year (4%).

Chart 2: Seven-Year Trend - Proportion of Deficient Bridges

Pavement

When looking at the five-year trend in average pavement scores, it is important to remember that Onondaga County’s decline in average scores is more pronounced because of this year’s adjustments in unrated roads to reflect system deterioration. (That is, last year’s scores may have been inflated due to the lack of adjustments.)

City of Syracuse and NYSDOT average ratings have declined over the last three years, while the Thruway average rating has improved.

Overall, pavement scores have shown a slight and consistent decrease from 7.2 in 2007 to 6.3 in 2011.

Chart 3: Five-Year Trend - Overall Rating of All Rated Roads

Chart 4 shows the percentage of FAE roads rated “good” or “excellent” over the last five rating cycles. Two notable declines are NYSDOT (going from 58% to 46%) and Onondaga County (46% to 22%). Overall, the proportion went from 51% to 39%.

Chart 4: Four-Year Trend - FAE Roads Rated “Good” or “Excellent”

CLOSING

By tracking these bridge and pavement conditions, the SMTC hopes to underscore the need for ongoing support of maintenance efforts. As this report has demonstrated over the years, deterioration of bridges and pavement is constant, demanding an ongoing program of monitoring and maintenance to keep the region's transportation infrastructure in good repair. As Chart I shows, 70% of the 2011-2015 TIP is dedicated to federal-aid eligible highways and to bridge projects. Bridge and pavement maintenance should continue to be a regional priority as funding available for capital improvements has been reduced.

Appendix A

The following photographs were taken from the New York State Department of Transportation Pavement Condition Rating Manual. The photos are examples of overlaid pavement. For examples of rigid and flexible pavement types, please refer to the manual.

Example of Rating 1 - Very Poor

Facility is impassable; large potholes, wide and deep cracks

Example of Rating 2 - Very Poor

Extreme deterioration; travel difficult at any speed

Example of Rating 3 - Poor

Distress is very severe and frequent

Example of Rating 4 - Poor

Distress is severe and frequent

Example of Rating 5 - Poor

Distress is frequent and moderate to severe

Example of Rating 6 - Fair

Occasional to frequent distress with moderate severity

Example of Rating 7 - Good

Infrequent to occasional distress with slight severity

Example of Rating 8 - Good

Infrequent distress, very slight severity

Example of Rating 9 - Excellent

No distress

Example of Rating 10 - Excellent

No distress; recently constructed or rehabilitated
